

Secure your printed documents.

TrustDelivery protects document transfers and printed paper documents from forgery.

Overview

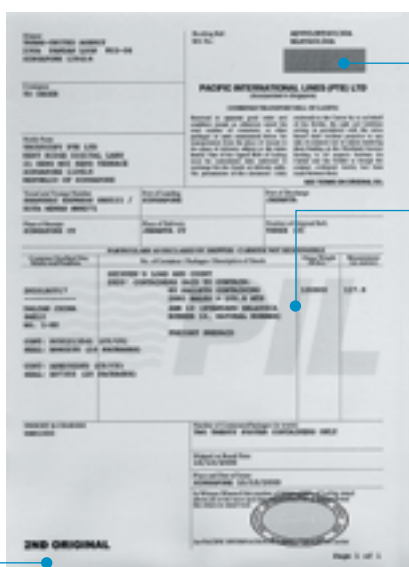

In today's business climate, paper documents still form the basis for all commercial and administrative transactions. Although electronic documents are increasingly being used, they are still not operationally acceptable. There is a need to ensure the seamless and secure transfer and exchange of paper documents to reduce operational costs, without making drastic changes to existing business processes.

TrustDelivery from Trustcopy is an integrated solution that ensures the security of document file transfers and protects printed documents from forgery and unauthorised duplication. The Web-ready solution takes

formatted text from any backend server and generates the final document to be printed out remotely. Security features include unique patented anti-forgery optical watermarks, control over numbers of copies, and copy detection.

How it works

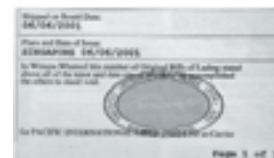

Key information from the document is embedded in Trustcopy's patented optical watermarks that are printed on the document. The embedded information is invisible and encrypted and can only be made visible with Trustcopy lens keys. Verification is achieved by comparing the visible printed information against the hidden and encrypted information in the watermarks.

Invisible optical watermark embedded with multi-layered information, visible with Trustcopy lens keys

Copy detection optical watermark background, changes its appearance after photocopying

Microprinting embedding security information on document

Key features

- Ability to embed multiple layers of independently encrypted information in a single optical watermark
- Multiple keys to view different layers of embedded hidden information
- Unique lens key used to reveal the encrypted information requires no software or electronic device
- Combination of copy detection and anti-forgery features
- Features added to the document during printing uses ordinary laser printer and paper
- Security features include: protecting key information and hand signatures from forgery and controlling number of printed copies
- Printing errors are detected and logged to provide audit trails
- Supports multiple platforms and environments

Key benefits

- Laser printed forgery-proof paper documents
- Electronic processing enables faster turnaround time and greater efficiency
- Lowers costs and eliminates wastage of pre-printed stationeries
- Secure remote printing reduces courier charges
- Paper document remains relevant and more secure so minimal impact to business practices and document processing workflow
- Enables safe and secure printing of trade documents, certificates, licenses, legal papers and passports
